

Data product Intro

I am a Senior Data Product Manager and Data Strategy Leader with over 12 years of experience driving data innovation and operational excellence within highly regulated financial services environments. My expertise lies in building and governing enterprise data products, defining product roadmaps, and translating complex business needs into scalable, actionable data solutions.

Throughout my career at Goldman Sachs, I have led the modernization of research analytics platforms, implemented real-time data quality monitoring, and delivered trusted data assets to over 500 stakeholders. My leadership in data governance, metadata management, and data quality frameworks has resulted in significant improvements, including a 50% boost in data quality and a 25% reduction in analyst-reported errors.

I am skilled in agile product management, stakeholder engagement, and cross-functional team leadership. My technical toolkit includes SQL, Tableau, Snowflake, Jira, Confluence, and advanced Excel, enabling me to deliver data products that drive business value and operational efficiency. I am passionate about mentoring teams, streamlining processes, and fostering a culture of responsible data stewardship.

In addition to my professional experience, I serve as a volunteer technology leader, designing and implementing AV and automation systems for large-scale events and facilities, and managing a team of 25+ volunteers.

With an MBA in Finance and a Bachelor of Engineering, I bring a unique blend of business acumen and technical expertise to every project I lead.
